

RD2 Declaration

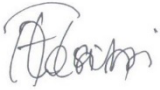

Please email to researchdegrees@kcl.ac.uk along with your thesis submission

Student ID number	K21168006
Student name	Oluwatosin Olatunde Alabi
Faculty	School of Biomedical Engineering & Imaging Sciences
Intended date of submission	21 st August 2026
Word count of thesis	48,770
Title of thesis	Towards Fine-Grained Surgical Scene Understanding through Grounded Instrument--Tissue Interaction Modelling

Has your thesis title changed since submission of the RD1?	Yes ☐	No ☒
Are you submitting a thesis incorporating publications?	Yes ☒	No ☐
Have you considered copyright issues that could impact on the final submission of your thesis? <i>Please look at the things to consider when submitting the final e-thesis.</i>	Yes ☒	No ☐
Does this thesis exceed the word limit prescribed in the academic regulations? <i>If you have exceeded the word limit for your thesis, you must obtain an exemption. Further details can be found here</i>	Yes ☐	No ☒

Use of Generative AI Tools in Thesis Writing
Doctoral students are permitted to use generative AI tools in an assistive role to clarify their own writing and help ensure that their own meaning is not misrepresented due to the quality and standard of the English used. An approved reasonable adjustment may also involve the use of, for example, generative Artificial Intelligence writing programmes, paraphrasing software, or machine translators. For more information, please refer to Generative AI and Doctoral Assessment: Guidance for Doctoral Students, Supervisors and Examiners. In line with King's guidance on generative AI for teaching, assessment and feedback, doctoral research students are expected to be explicit in acknowledging their use of generative AI tools such as Large Language Models like Microsoft Copilot, Google Bard or ChatGPT, or any other media generated through similar tools. Consistent with King's guidance and developing norms in academic publishing, the use of AI should be declared through an acknowledgement statement and not through authorship or citation. Students should select one of the two declarations below. Please note that both of these declarations describe permitted approaches to thesis authorship for King's research

degrees.	
I declare that no part of this thesis has been generated by AI software. These are my own words, and all references are cited accordingly. Note: Using software for English grammar and spell checking is consistent with this statement.	Yes ☐
Or	
I acknowledge the use of AI software to rewrite, rephrase and/or paraphrase parts of this thesis to ensure the quality and standard of the English used. I declare that my use of AI software is consistent with the research degree award criteria outlined in the Framework for Postgraduate Research Awards. This thesis is a genuine account of the research I have undertaken, and the content can still be considered my own words, with all references cited accordingly. ChatGPT (OpenAI)	Yes ☒
